Mercury is a global pollutant that travels long distances and as its most toxic form – methylmercury - accumulates in the food chain, posing a significant risk to human health, particularly to children.

*The **Zero Mercury Working Group (ZMWG)** is an international coalition of over 95 public, private and academic organisations working to reduce mercury supply, use and emissions.

The European Environmental Bureau (EEB) is Europe's largest network of environmental citizens' organisations.

We have over 140 members in over 30 countries.
