

To: EU Member State Environment Ministers

Brussels, 23<sup>rd</sup> December 2015

**Subject: The European Union (EU) and its Member States (MS) should rapidly ratify the Minamata Convention on mercury**

Dear Minister,

In October 2013, the EU was among the first to sign the Minamata Convention on Mercury, adopted in Minamata/Kumamoto, Japan. However, 50 countries must first ratify the Convention before it can enter into force and, unfortunately, while 20 countries have so far ratified, the EU has yet to do so.<sup>1</sup> Further delays in the EU ratification are likely to lead to significant delays in the entry into force and therefore the implementation of the Convention. Therefore, we the undersigned call for the EU and its Member States to expedite the process of ratifying the Convention.

Since 2005, with the Community Strategy Concerning Mercury<sup>2</sup> as its flagship, the EU has played an important role, pressing for global legally binding solutions to achieve adequate control and reduction of mercury use, supply and demand. Since then the EU has adopted several important policies to reduce exposure to mercury, including taking the lead in banning mercury exports and reducing mercury supply, demand and releases to the environment.

A public consultation on the implementation of the Minamata Convention at EU level was launched in late 2014. Its results, together with the final report of the EC commissioned study (launched in early 2014) concerning the EU legislative gaps vis-à-vis the Minamata Convention and the review of the Regulation on mercury export ban and safe storage, were published at the end of March 2015. The EU roadmap on the ratification and implementation of the Convention was then published in September 2015, and it recognizes the importance of expediting the process:

“This means that impact on EU’s environment as well as the exposure of people living in the Union cannot be reduced to an acceptable level through domestic policies alone. Co-ordinated international action is therefore needed to address the mercury problem in a globally effective manner.”

“In order to ensure the quick implementation of the Convention, the EU itself needs to ratify it as soon as possible (leading by example, and allowing MS to ratify it), and therefore to make sure its *acquis* allows for this ratification. By becoming Party at an early stage, the EU would have a strong voice at the first Conference of the Parties, where important implementing decisions will be taken.”<sup>3</sup>

Furthermore the effectiveness of EU policies on mercury depends in part on international implementing decisions. So the earlier the EU ratifies, the more likely it can secure the ‘added value’ of EU wide regulation.

---

<sup>2</sup> <http://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:52005DC0020>

<sup>3</sup> [http://ec.europa.eu/smart-regulation/roadmaps/docs/2014\\_env\\_014\\_minamata\\_convention\\_mercury\\_en.pdf](http://ec.europa.eu/smart-regulation/roadmaps/docs/2014_env_014_minamata_convention_mercury_en.pdf)

However, the mercury legislative package (which was to be proposed by the EC, including a proposal for a revised mercury Regulation, a Communication and a Council Decision for the Treaty ratification) has been seriously delayed, by almost a year, apparently due to the Better Regulation agenda. This EU delay in ratification may possibly postpone the Convention from entering into force, and is contrary to the leadership role the EU has taken to address the global mercury crisis over the last decade. As a result, it appears that the Better Regulation agenda is getting in the way of the EU's international commitments and our ability to lead on critical issues.

It is therefore imperative that the EU Commission expedites its internal process and presents its proposals as soon as possible. We have already urged the Commission<sup>4</sup> to take all necessary steps including the publication of the EU package, to ensure that ratifications will not be held up by the EU. To that end we urge you to accelerate your internal processes ensuring that your country's instrument of ratification is ready to be deposited to the Convention Secretariat at the latest as soon as the EU ratifies, to avoid further delays.

As you may be aware, delays in ratification and Convention implementation are already having an adverse effect on the global mercury supply and trade situation. For example, primary mercury mining has increased in Mexico, total mercury production increased in China, and mercury export "hot spots" have shifted to Asia, closer to countries with heavy use of mercury in artisanal and small scale gold mining. Such emissions from outside the EU undermine the health and environmental protection that the EU laws are intended to confer, and could thereby weaken their effectiveness.

On a parallel track we have also urged the EC to include in its revised mercury regulation proposal measures that go beyond the minimum requirements of the Minamata Convention, as per the outcome of the public consultation. These could include, but not be limited to, banning the export of mercury-containing products that are not allowed on the EU market and phasing out mercury in dental care since safe mercury-free alternatives are available. We hope that you can support this approach. This is necessary not only for the protection of EU (and world) citizens but also to ensure that the EU leadership role is maintained at the global level through rapid entry into force and effective implementation of the mercury treaty.

In summary, in order to remain a global leader on addressing the global mercury crisis, the EU and its Member States must act quickly to bring the Convention into force. Thank you in advance for your attention to this important issue.

Yours sincerely,

Jeremy Wates, Secretary General  
European Environmental Bureau (EEB), Brussels

Also on behalf of:

Genon Jensen, Executive  
Director, Health and Environment  
Alliance (HEAL), Brussels

Anja Leetz, Executive Director  
Health Care Without Harm  
(HCWH) Europe, Brussels

James Nix, Director,  
Green Budget Europe, Brussels
